1. Introduction

Maecenas quis mauris et quam porta faucibus sit amet vel ex. Suspendisse eget facilisis urna, ac accumsan nisl. Curabitur semper posuere convallis. Etiam vitae felis eget nisi maximus rhoncus. Aenean sagittis egestas nisi, a ultrices mauris fringilla vel. Donec accumsan, metus vel lobortis feugiat, dolor erat tempus elit, quis pretium lacus erat ut odio. Integer mattis suscipit tincidunt.¹

This document is an example, two items are cited: *The L^AT_EX Companion* book: see Goossens et al. 1993, 12–14. And Einstein’s journal paper: Einstein 1905.

Vivamus vestibulum lacinia laoreet. Pellentesque eu porta massa, a posuere odio. Praesent dolor risus, porta ac ornare ut, lacinia quis est. hendrerit tortor sit amet sagittis (Dirac 1981).

2.1.1 Math

The well known Pythagorean theorem $x^2 + y^2 = z^2$ was proved to be invalid for other exponents.
Something else is $\forall x \in X, \exists y \leq \varepsilon$.

And display math:

$$\int_a^b x^2 dx$$

2.1.2 Code

This is some very trivial python code:

```
1 def backwards(string):
```

```
2         return string[::-1] 37
3                                     38
4 def is_palindrome(string): 39
5     if string == backwards(string): 40
6         return True 41
7                                     42
8 A <- www >>= B # This is a comment 43
```
